

## Utility Bucket

Utility Buckets - "Slip on the forks" attachment buckets or otherwise called Universal Fit buckets could be used along with whichever model or design of extendable reach lift truck. If your unit can't be matched with a quick-tach unit, another new or used universal fit bucket could be located as an alternative. Standard universal lift truck buckets attach to forks that are up to six inches wide and are forty eight inches long. Larger fork pockets could be prearranged via an account manager upon request.

Because universal fit lift truck buckets slip onto the forks directly, they stay on the machine and are a lot less vulnerable to destruction. These buckets are also fifty percent deeper as opposed to the quick-tach bucket models. This extra room makes them perfect for lifting irregular shaped loads like broken up concrete, backfilling behind walls, tearing off roof trash, elevating roof gravel and moving large debris piles.

### Quick-Tach Buckets

Quick-Tach Buckets are constructed for extendable-reach forklifts. They are made to allow placement of material way beyond the reach of a loader. A hardened beveled cutting blade on both sides and on the leading edge reinforces stability, resistance to wear and offers supreme durability. Quick-Tach forklift buckets are enhanced by scuff bars along the base of the unit which shield it from scratches.

Quick-Tach lift buckets could in several situations substitute the blades and carriage of a lift truck, that may weigh anywhere between one hundred to seven hundred pounds. These buckets when installed can free up more load capacity, enabling it to deal with both larger and heavier objects. The Quick-Tach is able to pour materials around 1.5 feet higher due to the shorter depth of its bucket. These buckets are fabricated in a customized fashion to be able to suit all the specifications of specific models and makes of forklifts. It is important to check with a construction equipment specialist to be able to find the customized Quick-Tach bucket solution for your requirements.

Forklift bucket attachments are great for construction work on the ground level. They can be used to be able to transfer snow in the northern areas, gravel and even sand. Clean-up on the job location could be even be accomplished utilizing a forklift bucket. The various applications the bucket can do saves the business a lot of time and money as it does have to entirely switch tools or machinery and this could help avoid running into overtime.
