

## Toyota Forklift Part

Toyota Forklift Part - Ever since 1992, Toyota Material Handling inc., U.S.A., also referred to as TMHU, have been the top selling lift truck dealer in the United States. This company has been situated out of Irvine, California for well over 40 years, offering a wide-ranging line of quality lift trucks. With an impressive reputation of durability and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the keystone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are manufactured here.

All Toyota machines and components manufactured within North America adhere to the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to constant progress, and its environmental methods. It is the first and only producer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift vehicles emit 70 percent less smog forming emissions than the existing centralized EPA standards and have complied with California's strict emission standards and regulations.

### TMHU, U.S.A. - Leading the Industry

Brett Wood, President of TMHU, associates Toyota's accomplishment to its robust commitment to manufacture the best quality lift vehicles at the same time as delivering the utmost customer service and assistance. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also called TICO, is listed in Fortune Magazine as the world's largest lift truck provider and is among the magazines prominent World's Most Admired Companies.

### Redefining Environmental Responsibility

Toyota's parent company, Toyota Industries Corporation, has imparted an exceptional company ideology towards environmental conservancy within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability can not be matched by other companies and undoubtedly no other resource handling maker can so far rival Toyota. Environmental accountability is a fundamental feature of corporate decision making at Toyota and they are proud to be the first and only manufacturer to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift trucks. Yet one more reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission principles, and also meets California's more involved 2010 emission standards. The end product is a lift vehicle that creates 70% fewer smog forming emissions than the existing Federal standards allow.

Also in 2006, Toyota developed a partnership with the Arbor Day Foundation, furthering their commitment to the environment. More than 57,000 trees have been planted in regional parks and national forests damaged by environmental causes such as fires, as a result of this partnership. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's system of sellers to non-profit organizations and local customers to help sustain communities all over the United States

Toyota's lift vehicles offer improved efficiency, visibility, ergonomics and durability, and most significantly, the industry's leading safety technology. The company's System of Active Stability, often known as "SAS", helps limit the possibility of accidents and accidental injuries, in addition to increasing productivity levels while minimizing the potential for product and equipment damage.

System Active Stability senses numerous elements that could lead to lateral insecurity and possible lateral overturn. When any of those factors are detected, SAS instantly engages the Swing Lock Cylinder to stabilize the rear axle. This adjusts the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to avoid injuries or accidents while adding strength.

SAS was originally released to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS have been built-in to most of Toyota's internal combustion products. It is standard equipment on the latest 8-Series. There are more than 100,000 SAS-equipped lift trucks in action, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with obligatory operator education, overturn fatalities across all models have decreased by 13.6% since 1999. Furthermore, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's hardnosed values continue far beyond the machinery itself. The company believes in providing extensive Operator Safety Training courses to help customers meet and exceed OSHA standard 1910.178. Education programs, videos and a variety of materials, covering a wide scope of matters-from individual safety, to OSHA rules, to surface and load situations, are accessible through the vendor network.

Since the transaction of its first lift vehicle in the U.S. to the construction of its 350,000th lift truck produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has sustained a unbroken existence in the U.S. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America now are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of land.

Facilities include a National Customer Center, as well as manufacturing operations and supply centers for equipment and service components, with the entire commitment exceeding \$113 million dollars.

The new NCC was designed to operate for TMHU clients and sellers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its creator, Sakichi Toyoda, in 1867, and lastly a instruction center.

TMHU has 68 authorized industrial equipment dealers, along with 189 dealership locations throughout the United States, providing the most complete and inclusive consumer support and customer service in the industry. The company's new and Certified Used lift vehicles, service, components, and financing capabilities make Toyota dealerships a one-stop shop to ensure overall client satisfaction.
